

Producer Lester Marquez at El Gravileo

El Gravileo

Producer	Lester Francisco Marquez
Farm	El Gravileo
Altitude	1900 m
Region	El Zanate, San Sebastián, Lempira
Harvest	January - March
Awards	#17 COE 2024 & #6 COE 2025

About Finca El Gravileo

Specialty coffee producer Lester Francisco Marquez began growing coffee over ten years ago. His farm, El Gravileo, is named after the Silk Oak that are an important part of the lands' identity, and it began with only two coffee trees planted, until it expanded to the multitude of crops he has planted today. Originally, Lester's plan was to cultivate the parainema variety, and began with a greenhouse only a two hour journey away by foot. However, due to his high elevation, the variety didn't thrive, and so typica was the next option. Despite the elevation not working for the parainema variety, the climate is cool and stable, which is ideal for slow cherry maturation resulting in higher quality cup profiles. Cherries are harvested across El Gravileo and walked 40 minutes to Lester's home, where he lives with his wife Dima and their son, where it is processed.

Rony Gamez and the Café Raga team connected Project Origin with Lester, but also provide technical support and ongoing guidance to producers of Honduras. Café Raga supports producers on the cupping table, too, allowing Lester to learn more stages of the coffee chain and how small adjustments can make large impacts. It really is a wholesome and proactive community setting, encouraging the best and guiding through knowledge to result in the cup profiles we experience today, and tomorrow.

When asked what he wishes to see in the specialty coffee industry, Lester mentions "I hope the specialty coffee industry continues to recognise the hard work of producers. I would like more opportunities for training and development for farmers and their families so that we can continue improving both the quality and sustainability of our coffee."

El Gravileo

Varietal: Typica

Process: Washed

Tasting notes: lemonade, pear, white grape, pink bubblegum, red fruit, floral, sparkling, creamy, juicy

Processing Details

- o Picking of only red cherries
- o Harvested cherries are fermented the day of picking for 24 hours
- o Coffee is pulped and washed before drying on screens
- o Drying typically takes up to 20 days
- o Moisture content is reduced to 10-12%
- o Beans are stored in parchment until milling for export
- o Lester has a team of 5 people to help with this production during the harvest period

Finca La Cruz

Varietal: Catuai

Process: Natural

Lot: 2

Tasting notes: blueberry, mulberry, dark chocolate, tropical, pineapple, grape, plum, strawberry, rich, sweet, full body, clean

Processing Details

- o Picking of only red cherries
- o Cherries are separated and selected based on Brix measurements, as Brix level is crucial for this process
- o Whole cherries are submerged in an anaerobic tank filled with mosto for 120 hours
- o Cherries are laid to dry on raised beds in temperature controlled solar dryers for 29 days
- o Moisture content is reduced to 10.5%
- o Beans are stored in dried cherry pod until milling for export
- o Mosto is the byproduct liquid from coffee cherry fermentation. It is collected from previous fermentation tanks and can be used several times during fermentation before being replaced by new mosto. Mosto is produced in each tank, and builds with each lot.
